

Case Study:

Managed Programs

CDI provides contingent staffing solution for wide range of positions.

Client Description:

A global technology group supplying solutions, software and equipment to monitor, control and automate processes in a wide range of environments.

Situation:

The client needed a managed staffing provider who could help fulfill positions including engineering, manufacturing, professional, administrative, clerical, finance/accounting and information technology.

CDI Solution:

As an industry leader in providing domestic and international managed staffing solutions, CDI was selected to run a program for the client to manage all contingent employees and current suppliers. Over the course of two years, CDI successfully rolled out the program to 26 sites in the United States and nine sites in Canada. During this time, CDI's on-site staff of five placed over 600 contingent employees in the disciplines of engineering, information technology, administrative, legal, light industrial, accounting and finance.

Results:

Since the program was introduced, CDI achieved over \$1M in costs savings for the client. Because of the success of the Managed Staffing program, the client asked CDI to help with project work and to assist in securing full-time employees.
